**DETAILED ACTION**

1. Claims 1-17 are pending in the instant application.

***Allowable Subject Matter***

2. Claims 1-17 are allowed.
3. The following is an examiner's statement of reasons for allowance: The closest prior art of record includes "Trusted Computing, Peer-To-Peer Distribution, and the Economics of Pirated Entertainment." Stuart E Schechter, Rachel A. Greenstadt, and Michael D Smith, Hereafter Schechter; "Handbook of Applied Cryptography" Alfred J Menezes, Paul C. van Oorschot and Scott A. Vanstone, hereafter "Menezes."

In the response filed November 11/06/08, applicant swore behind the Schechter reference alleging diligence to October 16<sup>th</sup> 2002.

The teachings of Menezes include only hash collision attacks and do not teach or make obvious any use within the field of file sharing. The most pertinent art remaining is that of "Chord: A Scalable Peer-to-peer Lookup Service for Internet Applications" Ion Stoica, Robert Morris, David Karger, M. Frans Kaashoek, Hari Balakrishnany, hereafter Stoica and Mihcak et al. (US 2002/0184505), hereafter Mihcak. While both of the above cited references employ the use of hash functions, the implementation fails to teach or make obvious all of the limitations within the independent claims of the instant application. For

instance, Stoica teaches the use of hash functions in a peer-to-peer environment, however the above hash functions are not used to protect content, but to assure node identification. If one were to combine the teachings of Menezes in order to include limitations which deal with hash collision attacks there is no teaching of searching for content or performing a hash collision attack and re-submitting the content itself. Additionally, the teachings of Mihcak are not a fully featured file sharing client, but merely a way to determine if content is copied using a hash value. The above in combination with any of the above mentioned art which remains pertinent in this case would fail to teach a search for a file, saving a hash ID of the file as the hash is determined upon inspection and "answering inquiries" from other computers.

The implementation of a keyword search, hash collisions over a fully featured file sharing site, injection of an attacked file, and forced distribution of such an attacked file is a non-trivial addition to any of the teachings of the above mentioned prior art. Because the independent claims specifically provide for the above limitations, the references above do not teach or suggest the claimed language of the instant application.

The dependent claims which are definite and enable by the specification and being further limiting to the independent claims are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
